Abstract

EstateIQ AI – Intelligent Real Estate Price Exploration Tool

The EstateIQ AI is a data science project that explores property prices across different **cities and localities**. The project uses **Exploratory Data Analysis (EDA)** and **data visualization** to understand the major factors affecting property prices, such as:

- **Location and locality**
- **Property area and size**
- **Number of bedrooms**
- **Property type and amenities**
- **Price variations across different areas**

The tool will present these insights through clear and interactive visualizations, making it easier to identify **price patterns, trends, and price-driving factors**. The project aims to provide a simple, data-driven overview of the real estate market and help users better understand how different property features and locations influence prices.

The analysis can also help in **comparing properties across localities**, identifying areas with relatively higher or lower prices, and understanding how property characteristics contribute to overall price differences. This makes the tool useful for exploring real estate data and gaining meaningful insights from it.
